

MICRO BLASTERS

HIGH POTENCY LIQUID BACTERIAL SUSPENSION

- *Synergistic Microbe System
- *Stable-1 Year Shelf Life
- *Aerobic & Anaerobic Growth
- *Excellent Enzyme Production
- *Laboratory Certified
- *Environmentally Safe
- *Non-Pathogenic
- *Non-Corrosive

CAUTION: Keep out of reach of children.

48B42 NET CONTENTS GALLON(S)

MICRO BLASTERS is a liquid bio-enzymatic product base, developed for the removal of light to medium hydro-carbon spills associated with the automotive or light manufacturing industries. This product is made of surfactants and microbes. It eliminates drain stoppage, unpleasant odors, lift system failures and down line blockage by degrading waste matter. Multiple strains of naturally occurring bacteria will efficiently digest hydrocarbons, detergents, proteins, starches, fat, carbohydrates, grease, phenols and tissues.

DIRECTIONS FOR USE:

For maximum effectiveness, capture spill in a contained area and provide constant aeration. Maintain a temperature range of 55-100 degrees F.

HOLDING TANKS/SUMPS: Dosage per day, based on tank capacity

Up to 1000 gallons: 6-8 ounces per 100 gallons; over 1000 gallons: 4-6 ounces per 100 gallons.

Most effective when there is sufficient dissolved oxygen contained in the holding tank. In systems where the retention time is 4-7 days, apply double amount of daily dose, twice per week. In circumstances where hydro carbon content reaches 50,000 ppm, a nutrient supplement may be required. Ask your PIC consultant for proper nutrient.

DOSAGE BASED ON SYSTEM FLOW:

1 to 3 gallons of product for each million gallons of daily flow.

CAUTION: Keep out of the reach of children. Avoid getting in eyes or open wounds. Keep out of sunlight. Avoid exposure to extremely hot or boiling water, disinfectants or chlorinated compounds.
